

Highest-eigenmode test (Llama): high-freq modes dominate neighbour prediction; $\lambda_{\max}=2$ parity exists only for bipartite grid/ring, not frustrated hex

grid $\lambda_{\max}=2.00$ bipartite $\rightarrow$ parity
parity-validity=1.00

hex $\lambda_{\max}=1.58$ frustrated: no parity
parity-validity=0.65

ring $\lambda_{\max}=2.00$ bipartite $\rightarrow$ parity
parity-validity=0.99
