

Torus random-walk graph — smoke test of interpretation
torus = C_w (minor circle = cylinder WIDTH / mini-cycle) × C_L (major circle = cylinder LENGTH); both axes wrap.
Sweep 1: width w = 4, 5, 6 (rows 1-2, L=6). Sweep 2: length L = 4, 7, 10 (row 3, w=5).

flattened w=4, L=6
(orange=length wrap, blue=width wrap)

torus C_4 □ C_6

flattened w=5, L=6
(orange=length wrap, blue=width wrap)

torus C_5 □ C_6

flattened w=6, L=6
(orange=length wrap, blue=width wrap)

torus C_6 □ C_6

torus C_5 □ C_4

torus C_5 □ C_7

torus C_5 □ C_10
