

Gemma ring L40: power per Laplacian mode

cumulative variance vs #modes

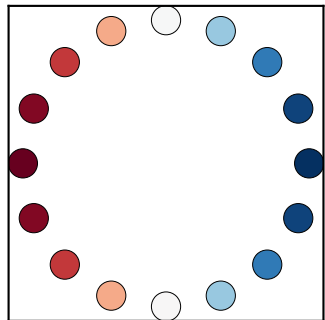

power: eigenmode x layer

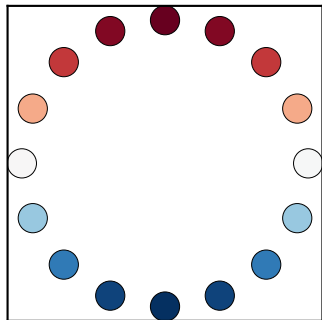

Gemma ring: Laplacian eigenmode DIVIDERS (% = variance share at L40)

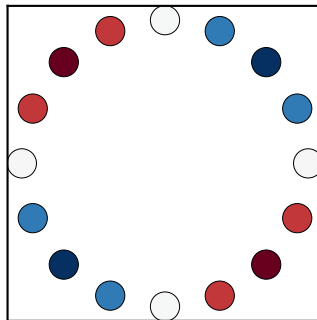

mode 1 $\lambda=0.15$ (20%)

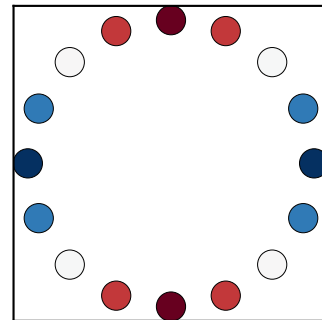

mode 2 $\lambda=0.15$ (25%)

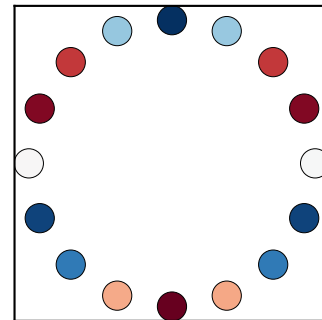

mode 3 $\lambda=0.59$ (7%)

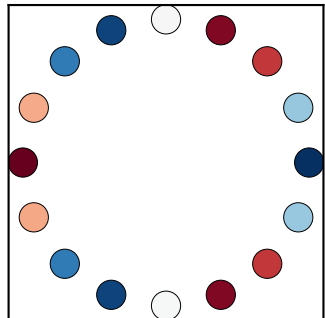

mode 4 $\lambda=0.59$ (8%)

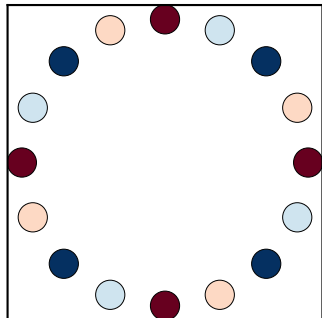

mode 5 $\lambda=1.23$ (3%)

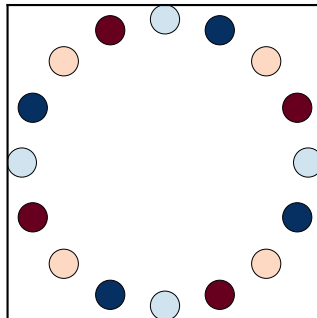

mode 6 $\lambda=1.23$ (3%)

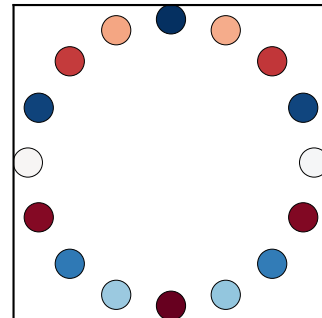

mode 7 $\lambda=2.00$ (2%)

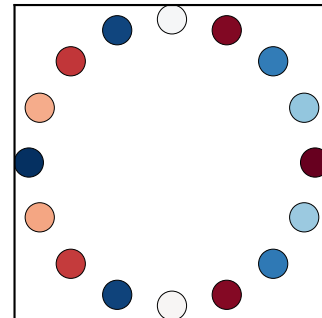

mode 8 $\lambda=2.00$ (1%)

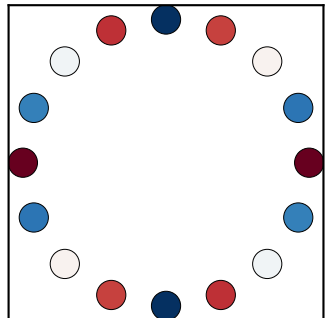

mode 9 $\lambda=2.77$ (2%)

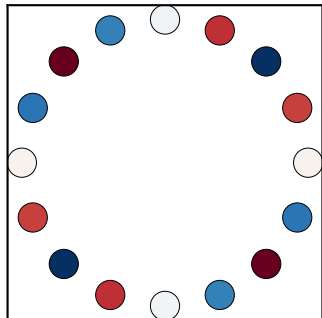

mode 10 $\lambda=2.77$ (3%)

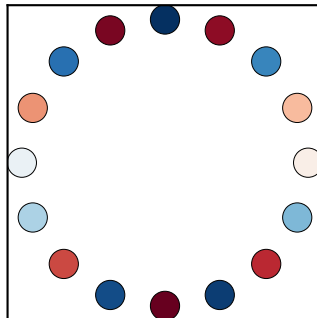

mode 11 $\lambda=3.41$ (4%)

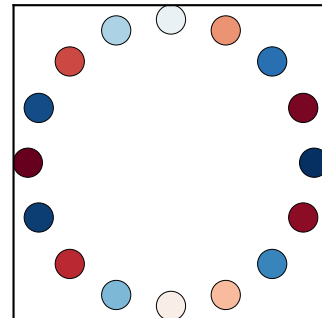

mode 12 $\lambda=3.41$ (5%)

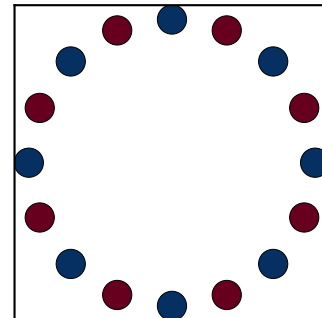

mode 13 $\lambda=3.85$ (6%)

mode 14 $\lambda=3.85$ (5%)

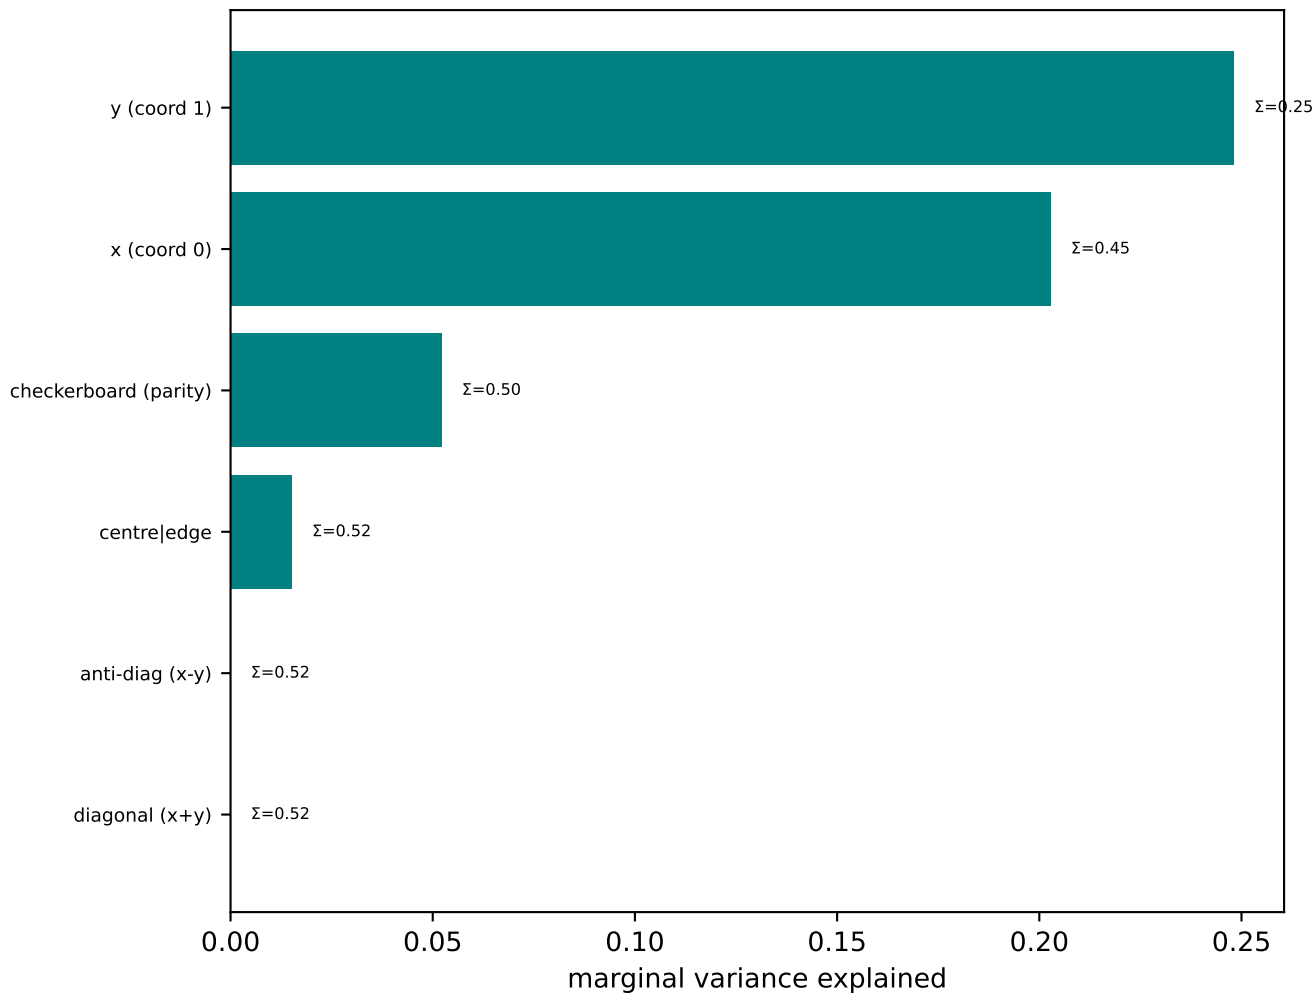

mode 15 $\lambda=4.00$ (5%)

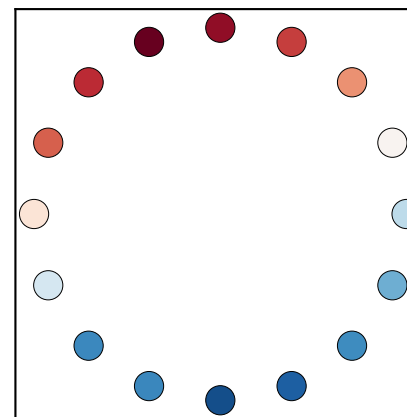

Gemma ring: named-cut basis (left) & model's own top axes (right)

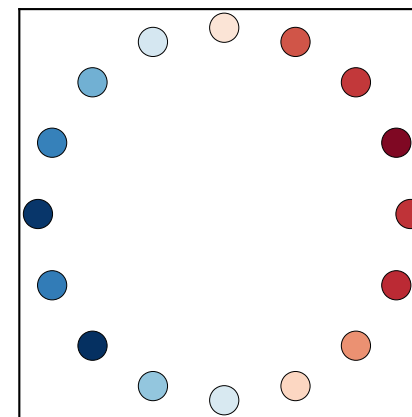

named cuts, greedy orthogonal (cumulative Σ)

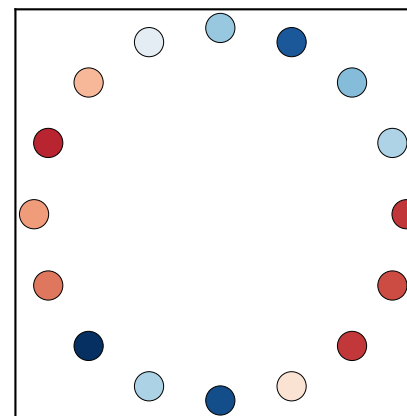

PC0 (25%)
 $\approx$ y (coord 1)

PC1 (20%)
 $\approx$ x (coord 0)

PC2 (9%)
 $\approx$ checkerboard (parity)

PC3 (8%)
 $\approx$ checkerboard (parity)
