

Qwen hex L35: power per Laplacian mode

cumulative variance vs #modes

power: eigenmode x layer

Qwen hex: Laplacian eigenmode DIVIDERS (% = variance share at L35)

mode 1 $\lambda=0.78$ (16%)

mode 2 $\lambda=1.02$ (11%)

mode 3 $\lambda=1.46$ (8%)

mode 4 $\lambda=2.69$ (6%)

mode 5 $\lambda=2.80$ (6%)

mode 6 $\lambda=3.40$ (5%)

mode 7 $\lambda=4.01$ (4%)

mode 8 $\lambda=4.73$ (4%)

mode 9 $\lambda=4.81$ (6%)

mode 10 $\lambda=5.30$ (6%)

mode 11 $\lambda=5.90$ (5%)

mode 12 $\lambda=6.42$ (5%)

mode 13 $\lambda=6.99$ (5%)

mode 14 $\lambda=7.77$ (6%)

mode 15 $\lambda=7.91$ (5%)

Qwen hex: named-cut basis (left) & model's own top axes (right)

named cuts, greedy orthogonal (cumulative Σ)

PC0 (20%)
 $\approx x$ (coord 0)

PC1 (12%)
 $\approx y$ (coord 1)

PC2 (8%)
 $\approx y$ (coord 1)

PC3 (7%)
 $\approx$ diagonal (x+y)
