

[square_grid] Llama — LAYER 0: validity | downstream neighbour mass (both output-level, identical across layers) | per-layer geometry. ALL-LAYER context ablation.
black=clean, red=remove probe, blue=remove random

generated-step validity (real output)

downstream neighbour mass (real output)

coord-probe R² @ LAYER 0

[square_grid] Llama — LAYER 1: validity | downstream neighbour mass (both output-level, identical across layers) | per-layer geometry. ALL-LAYER context ablation.
black=clean, red=remove probe, blue=remove random

generated-step validity (real output)

downstream neighbour mass (real output)

coord-probe R² @ LAYER 1

[square_grid] Llama — LAYER 2: validity | downstream neighbour mass (both output-level, identical across layers) | per-layer geometry. ALL-LAYER context ablation.
black=clean, red=remove probe, blue=remove random

generated-step validity (real output)

downstream neighbour mass (real output)

coord-probe R² @ LAYER 2

[square_grid] Llama — LAYER 3: validity | downstream neighbour mass (both output-level, identical across layers) | per-layer geometry. ALL-LAYER context ablation.
black=clean, red=remove probe, blue=remove random

generated-step validity (real output)

downstream neighbour mass (real output)

coord-probe R² @ LAYER 3

[square_grid] Llama — LAYER 4: validity | downstream neighbour mass (both output-level, identical across layers) | per-layer geometry. ALL-LAYER context ablation.
black=clean, red=remove probe, blue=remove random

generated-step validity (real output)

downstream neighbour mass (real output)

coord-probe R² @ LAYER 4

[square_grid] Llama — LAYER 5: validity | downstream neighbour mass (both output-level, identical across layers) | per-layer geometry. ALL-LAYER context ablation.
black=clean, red=remove probe, blue=remove random

generated-step validity (real output)

downstream neighbour mass (real output)

coord-probe R² @ LAYER 5

[square_grid] Llama — LAYER 6: validity | downstream neighbour mass (both output-level, identical across layers) | per-layer geometry. ALL-LAYER context ablation.
black=clean, red=remove probe, blue=remove random

generated-step validity (real output)

downstream neighbour mass (real output)

coord-probe R² @ LAYER 6

[square_grid] Llama — LAYER 7: validity | downstream neighbour mass (both output-level, identical across layers) | per-layer geometry. ALL-LAYER context ablation.
black=clean, red=remove probe, blue=remove random

generated-step validity (real output)

downstream neighbour mass (real output)

coord-probe R² @ LAYER 7

[square_grid] Llama — LAYER 8: validity | downstream neighbour mass (both output-level, identical across layers) | per-layer geometry. ALL-LAYER context ablation.
black=clean, red=remove probe, blue=remove random

generated-step validity (real output)

downstream neighbour mass (real output)

coord-probe R² @ LAYER 8

[square_grid] Llama — LAYER 9: validity | downstream neighbour mass (both output-level, identical across layers) | per-layer geometry. ALL-LAYER context ablation.
black=clean, red=remove probe, blue=remove random

generated-step validity (real output)

downstream neighbour mass (real output)

coord-probe R² @ LAYER 9

[square_grid] Llama — LAYER 10: validity | downstream neighbour mass (both output-level, identical across layers) | per-layer geometry. ALL-LAYER context ablation.
black=clean, red=remove probe, blue=remove random

generated-step validity (real output)

downstream neighbour mass (real output)

coord-probe R² @ LAYER 10

[square_grid] Llama — LAYER 11: validity | downstream neighbour mass (both output-level, identical across layers) | per-layer geometry. ALL-LAYER context ablation.
black=clean, red=remove probe, blue=remove random

generated-step validity (real output)

downstream neighbour mass (real output)

coord-probe R^2 @ LAYER 11

[square_grid] Llama — LAYER 12: validity | downstream neighbour mass (both output-level, identical across layers) | per-layer geometry. ALL-LAYER context ablation.
black=clean, red=remove probe, blue=remove random

generated-step validity (real output)

downstream neighbour mass (real output)

coord-probe R² @ LAYER 12

[square_grid] Llama — LAYER 13: validity | downstream neighbour mass (both output-level, identical across layers) | per-layer geometry. ALL-LAYER context ablation.
black=clean, red=remove probe, blue=remove random

generated-step validity (real output)

downstream neighbour mass (real output)

coord-probe R² @ LAYER 13

[square_grid] Llama — LAYER 14: validity | downstream neighbour mass (both output-level, identical across layers) | per-layer geometry. ALL-LAYER context ablation.
black=clean, red=remove probe, blue=remove random

generated-step validity (real output)

downstream neighbour mass (real output)

coord-probe R² @ LAYER 14

[square_grid] Llama — LAYER 15: validity | downstream neighbour mass (both output-level, identical across layers) | per-layer geometry. ALL-LAYER context ablation.
black=clean, red=remove probe, blue=remove random

generated-step validity (real output)

downstream neighbour mass (real output)

coord-probe R² @ LAYER 15

[square_grid] Llama — LAYER 16: validity | downstream neighbour mass (both output-level, identical across layers) | per-layer geometry. ALL-LAYER context ablation.
black=clean, red=remove probe, blue=remove random

generated-step validity (real output)

downstream neighbour mass (real output)

coord-probe R^2 @ LAYER 16

[square_grid] Llama — LAYER 17: validity | downstream neighbour mass (both output-level, identical across layers) | per-layer geometry. ALL-LAYER context ablation.
black=clean, red=remove probe, blue=remove random

generated-step validity (real output)

downstream neighbour mass (real output)

coord-probe R² @ LAYER 17

[square_grid] Llama — LAYER 18: validity | downstream neighbour mass (both output-level, identical across layers) | per-layer geometry. ALL-LAYER context ablation.
black=clean, red=remove probe, blue=remove random

generated-step validity (real output)

downstream neighbour mass (real output)

coord-probe R² @ LAYER 18

[square_grid] Llama — LAYER 19: validity | downstream neighbour mass (both output-level, identical across layers) | per-layer geometry. ALL-LAYER context ablation.
black=clean, red=remove probe, blue=remove random

generated-step validity (real output)

downstream neighbour mass (real output)

coord-probe R² @ LAYER 19

[square_grid] Llama — LAYER 20: validity | downstream neighbour mass (both output-level, identical across layers) | per-layer geometry. ALL-LAYER context ablation.
black=clean, red=remove probe, blue=remove random

generated-step validity (real output)

downstream neighbour mass (real output)

coord-probe R² @ LAYER 20

[square_grid] Llama — LAYER 21: validity | downstream neighbour mass (both output-level, identical across layers) | per-layer geometry. ALL-LAYER context ablation.
black=clean, red=remove probe, blue=remove random

generated-step validity (real output)

downstream neighbour mass (real output)

coord-probe R² @ LAYER 21

[square_grid] Llama — LAYER 22: validity | downstream neighbour mass (both output-level, identical across layers) | per-layer geometry. ALL-LAYER context ablation.
black=clean, red=remove probe, blue=remove random

generated-step validity (real output)

downstream neighbour mass (real output)

coord-probe R² @ LAYER 22

[square_grid] Llama — LAYER 23: validity | downstream neighbour mass (both output-level, identical across layers) | per-layer geometry. ALL-LAYER context ablation.
black=clean, red=remove probe, blue=remove random

generated-step validity (real output)

downstream neighbour mass (real output)

coord-probe R² @ LAYER 23

[square_grid] Llama — LAYER 24: validity | downstream neighbour mass (both output-level, identical across layers) | per-layer geometry. ALL-LAYER context ablation.
black=clean, red=remove probe, blue=remove random

generated-step validity (real output)

downstream neighbour mass (real output)

coord-probe R² @ LAYER 24

[square_grid] Llama — LAYER 25: validity | downstream neighbour mass (both output-level, identical across layers) | per-layer geometry. ALL-LAYER context ablation.
black=clean, red=remove probe, blue=remove random

generated-step validity (real output)

downstream neighbour mass (real output)

coord-probe R² @ LAYER 25

[square_grid] Llama — LAYER 26: validity | downstream neighbour mass (both output-level, identical across layers) | per-layer geometry. ALL-LAYER context ablation.
black=clean, red=remove probe, blue=remove random

generated-step validity (real output)

downstream neighbour mass (real output)

coord-probe R² @ LAYER 26

[square_grid] Llama — LAYER 27: validity | downstream neighbour mass (both output-level, identical across layers) | per-layer geometry. ALL-LAYER context ablation.
black=clean, red=remove probe, blue=remove random

generated-step validity (real output)

downstream neighbour mass (real output)

coord-probe R² @ LAYER 27

[square_grid] Llama — LAYER 28: validity | downstream neighbour mass (both output-level, identical across layers) | per-layer geometry. ALL-LAYER context ablation.
black=clean, red=remove probe, blue=remove random

generated-step validity (real output)

downstream neighbour mass (real output)

coord-probe R² @ LAYER 28

[square_grid] Llama — LAYER 29: validity | downstream neighbour mass (both output-level, identical across layers) | per-layer geometry. ALL-LAYER context ablation.
black=clean, red=remove probe, blue=remove random

generated-step validity (real output)

downstream neighbour mass (real output)

coord-probe R² @ LAYER 29

[square_grid] Llama — LAYER 30: validity | downstream neighbour mass (both output-level, identical across layers) | per-layer geometry. ALL-LAYER context ablation.
black=clean, red=remove probe, blue=remove random

generated-step validity (real output)

downstream neighbour mass (real output)

coord-probe R² @ LAYER 30

[square_grid] Llama — LAYER 31: validity | downstream neighbour mass (both output-level, identical across layers) | per-layer geometry. ALL-LAYER context ablation.
black=clean, red=remove probe, blue=remove random

generated-step validity (real output)

downstream neighbour mass (real output)

coord-probe R² @ LAYER 31
