

Two-regime switching walk (HMM), fitted on all strict-city games

longest game: steps colored by $P(\text{stuck regime})$
red = stuck (frozen micro-motion), blue = explore

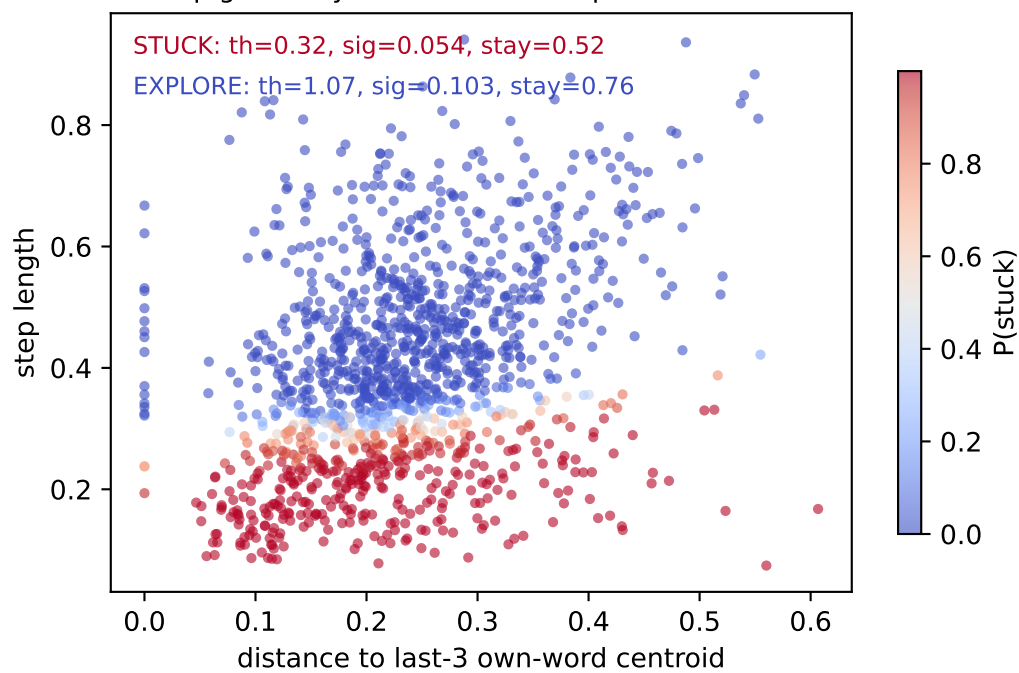

regime posterior per step; black dots = observable family-run steps

step geometry: stuck = short steps near centroid

STUCK: $th=0.32$, $sig=0.054$, $stay=0.52$

EXPLORE: $th=1.07$, $sig=0.103$, $stay=0.76$

dwell times (mean stuck 2.1, explore 4.1)
